

Your product moves at the speed of your oldest code.

I take that code over, I make it safe to change, and I give it back its speed. **Without ever stopping your production.**

Available from October 2026

19 years

building new systems and taking over the ones others wrote

1 point of contact

from the front end to the infrastructure, no vendor to coordinate

100 %

of the code covered by tests, nothing ships blind

7 months

to deliver a full production studio, as a pair

TOOLBELT

TypeScript · Node.js · React

AWS serverless · Terraform

PHP · Symfony

LLMs in production · coding agents

Hexagonal architecture · DDD · TDD

THREE SENTENCES I HEAR BEFORE EVERY ENGAGEMENT

“Nobody knows how it works any more.”

The original team has gone, there are no tests and the documentation is patchy, and every fix breaks something else. I map the system and put a safety net of tests over the critical paths **before** touching anything.

“We are being told to rewrite everything.”

It is the riskiest project a company can start: double the budget, two years without a new feature, and the old system still running. I break the existing one down piece by piece, each step shippable and reversible.

“We have been talking about AI for two years, nothing is live.”

Because it is treated as a demo instead of an engineering problem. I embed models in the product, with the reviews and the tests that go with them. And if your data must not leave your walls, they run inside them.

THEY PUT THEIR TRUST IN ME

sanofi

leboncoin

iAD IMMOBILIER

AIRFRANCE

Earlier, Amadeus IT and Cora. The platforms I tooled today serve campaigns for UNICEF and for the Paris Saint-Germain endowment fund.

WHAT THAT LOOKS LIKE IN PRACTICE

GoTombola

SINCE 2026

Producing a site no longer requires a developer

At the start, every site went through a developer: a bottleneck on each new campaign. As a pair with the CTO, seven months to deliver a studio anyone on the team uses without writing code. The AI writes the site, the tool assembles it, the pipeline publishes it.

Its CTO has been hiring me back since 2015.

Sanofi

2024 – 2025

Two bespoke builds turned into one configurable platform

Design of the foundation that made it possible to generalise an AI document generation tool, then the gradual dismantling of the monolith into independent services.

IAD

2022 – 2024

A matching engine that unlocks cross-selling across the network

Automatic matching of the network's properties against buyers' criteria, including properties never listed online.

France's leading estate agent network, 14,000 advisors.

leboncoin

2021 – 2022

An acquired application secured, then brought in-house

Taken over with no tests and only patchy documentation, put back into production inside the group's ecosystem, then the professional accounts migrated to stop paying their incumbent provider.

WHAT THE PEOPLE WHO HIRED ME SAY

“A true asset for companies that want to build a product quickly by combining pragmatism and quality.”

David Huby

Head of Engineering, IAD Group

“A steamroller when it comes to tackling thorny issues, and someone who produces stable, maintainable code.”

Sébastien Veigneau

Air France Captain, co-founder of DgBirds

The first conversation is there to qualify your problem, not to sell you something.

Tell me about your system and what is stopping you from moving forward. We will bring you a solution.
